

LuxLift TURN – Pole mounting brackets

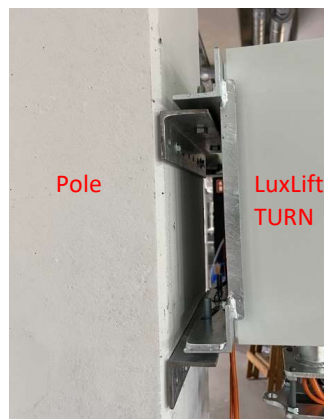

Simple pole mounting

With our mast mounting brackets, the LuxLift TURN can be mounted easily and its angle can be adjusted steplessly.

The upper and lower mounting brackets are attached to the mast, then the lift is hooked into the four screws. By moving the angle plate at the lower mounting bracket, the mast inclination is compensated and fixed with screws.

Attachment of the mounting brackets to the pole

Suspension of LuxLift TURN

Detail upper mounting bracket

Angle compensation on the lower mounting bracket

Earth connection via M16 screw

Easy electrical wiring
